

Float-beside-table quality sample

This paragraph should flow beside the floated infobox table on the right. Marker **FLOAT-BESIDE-PROSE-A** must remain readable while the table occupies the right margin of the content box.

A second wrapping paragraph continues the flow under and around the float where the engine packs consecutive content. Marker **FLOAT-BESIDE-PROSE-B** anchors regression text extraction for the golden corpus.

Third paragraph adds enough copy for wrap-around coverage without forcing a second page: packing density, clearfix, and table borders stay in the report-friendly float lite subset.

After **FLOAT-CLEAR-BOTH**, content resumes full width below the float and table. A normal in-flow summary table follows without competing for float space.
