

Sizing & Box Model Specimen

Border box: explicit width 180 px (content-box semantics - padding and border add on top), 3 px border, 12/16 px padding. Margins separate it from the following grid.

Rule	Value
1 px	0.75 pt at 96 dpi
Box model	width/height explicit = content-box; auto width = border-box-ish
Margins	collapse between siblings (larger wins)
