

# Font Resolution Showcase

Ten pages of exact @font - face faces (TTF + WOFF2), CSS generics, and metric-alias stacks for the v0.2.5 resolver and v0.2.6 WOFF2 / opt-in aliases work.

## What this fixture proves

| Surface            | How to exercise it                                                     |
|--------------------|------------------------------------------------------------------------|
| Exact @font - face | Local TTF/WOFF2 under testdata/fonts                                   |
| Metric aliases     | --use-metric-font-aliases + discovered Gelasio/Cousine/Arimo/Tinos     |
| System discovery   | --use-system-fonts (faces also in ~/.local/share/fonts/gowk-fixture57) |
| Samples            | make samples and make samples-metric-aliases                           |

Needle text for golden checks: FONTSHOW.

## Metric-alias CSS stacks

With `--use-metric-font-aliases` / `UseMetricFontAliases` and substitutes in the registry, these stacks pick Gelasio / Cousine / Arimo / Tinos. Without the flag they continue to generics / Liberation.

| CSS stack                         | Sample                                         | Opt-in face |
|-----------------------------------|------------------------------------------------|-------------|
| Georgia, "Times New Roman", serif | <b>Northline brief set in a Georgia stack.</b> | Gelasio     |
| "Courier New", monospace          | mono payload: ORDER-57-ALIAS                   | Cousine     |
| Arial, Helvetica, sans-serif      | Sans stack aimed at Arimo when present.        | Arimo       |
| "Times New Roman", Times, serif   | Serif stack aimed at Tinos when present.       | Tinos       |

Exact substitute families (also via `@font-face`)

GELASIO EXACT

Gelasio loaded from testdata/fonts.

COUSINE EXACT

Cousine loaded from testdata/fonts.

ARIMO EXACT

Arimo loaded from testdata/fonts.

TINOS EXACT

Tinos loaded from testdata/fonts.

## CSS generics (bundled Liberation / DejaVu)

### SERIF

Generic serif → Liberation Serif.

### SANS-SERIF

Generic sans → Liberation Sans.

### MONOSPACE

Generic mono → Liberation Mono.

## Operator recipes

| Goal                         | Flags / API                                                                |
|------------------------------|----------------------------------------------------------------------------|
| Deterministic default        | No font flags                                                              |
| Load showcase faces + WOFF2  | <code>--font-path testdata/fonts</code> or <code>FontPaths</code>          |
| Host discovery               | <code>--use-system-fonts</code> / <code>UseSystemFonts</code>              |
| WeasyPrint-style substitutes | <code>--use-metric-font-aliases</code> / <code>UseMetricFontAliases</code> |
| Sample folders               | <code>make samples</code> · <code>make samples-metric-aliases</code>       |

Variable fonts (fvar), EOT, and data: @font-face stay rejected/skipped. Exact matches beat aliases.

# Mixed composition

One page mixing display, script, mono, and alias stacks.

## BEBAS MASTHEAD

*Signed with Great Vibes*

**SCORE 5700 · PRESS START**

**Georgia-stack paragraph for body copy comparison against WeasyPrint.**
