Fixture 67: Coordinate Shapes (corner-shape family)

The 34 corner-shape properties · superellipse corners drawn inside the used border radius · Chrome 155 support badge per row · font-family "Liberation Sans"

COORDINATE-SHAPES

One live example per property. Each box keeps a 24px corner box, and the corner curve inside that box follows the CSS Borders 4 superellipse map. Rows 1-8 shape a single physical or logical corner on a 24px radius baseline; rows 9-16 shape a two-corner pair; row 17 uses the four-value `corner-shape` shorthand; rows 18-34 use the shorthands that set a radius and a shape together on a radiusless box. The engine turns each non-round corner into one outline path, so the fill and the solid border follow the same curve. The badge marks whether Chrome 155 ships the property: green means yes, red means the shorthand is in the draft but not implemented in Chrome yet.

Shape longhands: one corner

Rows 1-8. Physical names and the logical twins on the fixed left-to-right map.

#	Property / value	What it does	Effect (live)
1	`corner-top-left-shape` shape longhand · physical corner · Chrome yes Chrome supported	Chamfers only the top-left corner box; the other three keep the round quarter-ellipse.	 bevel: straight chamfer (K=0)
2	`corner-top-right-shape` shape longhand · physical corner · Chrome yes Chrome supported	Scoops only the top-right corner box into a concave arc.	 scoop: concave arc (K=-1)
3	`corner-bottom-right-shape` shape longhand · physical corner · Chrome yes Chrome supported	Cuts the bottom-right corner box inward as a notch.	 notch: concave V to the inner corner (K=-infinity)
4	`corner-bottom-left-shape` shape longhand · physical corner · Chrome yes Chrome supported	Rounds the bottom-left corner box toward a squircle (flatter sides than a quarter-ellipse).	 squircle: squared superellipse (K=2)
5	`corner-start-start-shape` shape longhand · logical, fixed LTR map · Chrome yes Chrome supported	Logical start-start is top-left in horizontal left-to-right flow; same shape as row 1.	 start-start = top-left
6	`corner-start-end-shape` shape longhand · logical, fixed LTR map · Chrome yes Chrome supported	Logical start-end is top-right; same shape as row 2.	 start-end = top-right
7	`corner-end-start-shape` shape longhand · logical, fixed LTR map · Chrome yes Chrome supported	Logical end-start is bottom-left; same shape as row 4 shifted to the left edge.	 end-start = bottom-left

8	`corner-end-end-shape` shape longhand · logical, fixed LTR map · Chrome yes Chrome supported	Logical end-end is bottom-right; same shape as row 4.	 end-end = bottom-right

Shape longhands: a two-corner pair

Rows 9-16. One value sets both corners of the pair; two values run left then right (top and bottom sides) or top then bottom (left and right sides).

#	Property / value	What it does	Effect (live)
9	`corner-top-shape` pair longhand · left then right · Chrome yes Chrome supported	Two values shape the top-left then the top-right corner; the bottom corners stay round.	 bevel (left) then scoop (right)
10	`corner-bottom-shape` pair longhand · left then right · Chrome yes Chrome supported	Two values shape the bottom-left then the bottom-right corner.	 scoop (left) then bevel (right)
11	`corner-left-shape` pair longhand · top then bottom · Chrome yes Chrome supported	Two values shape the top-left then the bottom-left corner.	 notch (top) then scoop (bottom)
12	`corner-right-shape` pair longhand · top then bottom · Chrome yes Chrome supported	Two values shape the top-right then the bottom-right corner.	 squircle (top) then square (bottom)
13	`corner-block-start-shape` pair longhand · logical, fixed LTR map · Chrome yes Chrome supported	Start then end on the inline axis: start-start then start-end, which is both top corners.	 one value: both top corners notched
14	`corner-block-end-shape` pair longhand · logical, fixed LTR map · Chrome yes Chrome supported	Start then end on the block-end side: both bottom corners.	 one value: both bottom corners notched
15	`corner-inline-start-shape` pair longhand · logical, fixed LTR map · Chrome yes Chrome supported	Start then end on the block axis: start-start then end-start, which is both left corners.	 one value: both left corners notched
16	`corner-inline-end-shape` pair longhand · logical, fixed LTR map · Chrome yes Chrome supported	Start then end on the inline-end side: both right corners.	 one value: both right corners notched

corner-shape: the four-value shorthand

Row 17. Values shape the top-left, top-right, bottom-right, and bottom-left corners in border-radius order; missing values copy per border-radius.

#	Property / value	What it does	Effect (live)
17	`corner-shape` shorthand · 1 to 4 values · Chrome yes Chrome supported	The four values shape the top-left, top-right, bottom-right, and bottom-left corners in that order, the border-radius path order; a missing bottom copies top, a missing right copies top, and a missing left copies right. Chrome 155 resolves the same declaration to the same four corner shapes.	 top-left scoop, top-right bevel, bottom-right notch, bottom-left squircle

Radius-plus-shape shorthands

Rows 18-34. Each shorthand sets the corner radius and the shape together; a missing piece resets to its initial value. Chrome 155 does not implement these yet, so its column shows plain 0 or 24px radius corners for these rows.

#	Property / value	What it does	Effect (live)
18	`corner` shorthand · radius piece and shape piece · Chrome no Chrome not implemented	Sets all four radii and all four shapes in one declaration. Chrome does not implement this shorthand yet.	 24px radius, all corners bevelled
19	`corner-top` side shorthand · radius piece and shape piece · Chrome no Chrome not implemented	Sets the top radius and the top shape pair; the bottom corners stay at 0 radius and round. Not implemented in Chrome 155.	 top corners scooped
20	`corner-right` side shorthand · radius piece and shape piece · Chrome no Chrome not implemented	Sets the right radius and the right shape pair. Not implemented in Chrome 155.	 right corners scooped
21	`corner-bottom` side shorthand · radius piece and shape piece · Chrome no Chrome not implemented	Sets the bottom radius and the bottom shape pair. Not implemented in Chrome 155.	 bottom corners scooped
22	`corner-left` side shorthand · radius piece and shape piece · Chrome no Chrome not implemented	Sets the left radius and the left shape pair. Not implemented in Chrome 155.	 left corners scooped
23	`corner-block-start` side shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Block-start is the top side on the fixed map. Not implemented in Chrome 155.	 top corners bevelled
24	`corner-block-end` side shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Block-end is the bottom side on the fixed map. Not implemented in Chrome 155.	 bottom corners bevelled
25	`corner-inline-start` side shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Inline-start is the left side on the fixed map. Not implemented in Chrome 155.	 left corners bevelled
26	`corner-inline-end` side shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Inline-end is the right side on the fixed map. Not implemented in Chrome 155.	 right corners bevelled

27	`corner-top-left` single-corner shorthand · physical corner · Chrome no Chrome not implemented	Sets only the top-left radius and the top-left shape. Not implemented in Chrome 155.	 only the top-left corner changes
28	`corner-top-right` single-corner shorthand · physical corner · Chrome no Chrome not implemented	Sets only the top-right radius and the top-right shape. Not implemented in Chrome 155.	 only the top-right corner changes
29	`corner-bottom-right` single-corner shorthand · physical corner · Chrome no Chrome not implemented	Sets only the bottom-right radius and the bottom-right shape. Not implemented in Chrome 155.	 only the bottom-right corner changes
30	`corner-bottom-left` single-corner shorthand · physical corner · Chrome no Chrome not implemented	Sets only the bottom-left radius and the bottom-left shape. Not implemented in Chrome 155.	 only the bottom-left corner changes
31	`corner-start-start` single-corner shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Logical start-start resolves to top-left through the same fixed map as the radius longhands. Not implemented in Chrome 155.	 start-start = top-left
32	`corner-start-end` single-corner shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Logical start-end resolves to top-right. Not implemented in Chrome 155.	 start-end = top-right
33	`corner-end-start` single-corner shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Logical end-start resolves to bottom-left. Not implemented in Chrome 155.	 end-start = bottom-left
34	`corner-end-end` single-corner shorthand · logical, fixed LTR map · Chrome no Chrome not implemented	Logical end-end resolves to bottom-right. Not implemented in Chrome 155.	 end-end = bottom-right

Chrome badges captured 2026-10-17 against Chrome 155.0.8059.84 with CSS.supports per property: the 16 shape longhands and corner-shape are supported with every keyword and both superellipse infinity forms; the 17 corner and corner-* shorthands are not implemented. Row 17's four-corner resolution was captured from the same build with getComputedStyle (corners resolve in border-radius order; missing values copy like border-radius). Named wave limits on the engine side: a non-round corner with a dashed or dotted border paints a solid path, border sides that differ in width or color keep the rounded stroke-rect geometry, background-clip and overflow clip keep their existing boxes instead of following the shaped outer path, and box-shadow keeps today's radii. Logical names use the fixed horizontal left-to-right map (no vertical writing-mode table yet).
